DETAILED ACTION

Request for Continued Examination

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/29/04 has been entered.

Amendment

2. Applicant's submittal of an amendment was entered on 10/29/04, wherein:

- claims 17-29 are pending;
- claims 9-16 have been canceled; and
- claims 17-29 have been added.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 17-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,151,680 (Kim) in view of U.S. Patent No. 6,560,499 (Demmer).

Regarding **claim 17**, Kim discloses a product design system operable on a digital computer for performing engineering design calculations including: a first module for inputting project parameters (see Figure 6, "Pipe Data"); a second module for inputting load calculation parameters (see Figure 6, "Design Load & Pressure"); a third module for inputting range of materials (see Figure 6, "Material Property"); a fourth module for inputting commercial limitation parameters (see Figure 6, "Design load & Pressure"); a fifth module for inputting design parameters and a design method (see Figure 6, "Design load & Pressure"; see also Figure 19); a sixth module for performing design calculations (see Figure 20); a first interface for providing strength and materials data (see Figure 6 and Figure 20); a second interface for comparing product design parameters with market data for existing products (see Figure 18); **[claim 18]** list all product designs (see Figure 17); **[claim 20]** said system is adapted for fluid pipeline design (see Abstract); **[claim 21]** said third module receives parameters for pipeline materials (see Figure 6); **[claim 22]** perform calculations to determine pipe specifications (see Figure 20).

Kim fails to disclose comparing pipe design to products in the market and selecting products that meet the design.

Demmer teaches an integrated engineering design and management system that allows for material procurement based on engineering design input (see column 16, lines 10-32).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Kim with integrated product procurement as taught by Demmer, because integration of product procurement increases the efficiency of the total project, wherein reducing costs and potential purchasing errors.

Art Unit: 3627

Claims 25-29 directed to a method for performing engineering design calculations an integrating market data are disclosed by the combination of Kim and Demmer as set forth above for system claims 17-24.

Response to Arguments

5. Applicant's arguments filed 4 have been fully considered but they are not persuasive.
